

THE CUSTOMER FINDER BLUEPRINT

The practical system for finding the right customers, starting conversations and turning interest into sales.

STOP GUESSING WHERE YOUR CUSTOMERS ARE.

This workbook helps you define your customer, find where they already spend attention, create messages that matter, capture leads, follow up and improve your results.

Launch Edition

For small business owners, entrepreneurs and service providers.

Practical • Simple • Action-focused

What You Will Build

By the end of this Blueprint, you will have a simple customer-finding system you can repeat every week.

The 8-Part System

1. Position	Know what you sell, who it helps and why they should care.
2. Profile	Build a clear picture of your ideal customer.
3. Research	Discover their problems, language and buying triggers.
4. Locate	Find the channels, communities and places where they already are.
5. Attract	Create useful content and offers that earn attention.
6. Capture	Give interested people one easy next step.
7. Follow Up	Build trust and move conversations forward.
8. Convert & Improve	Make the offer, track results and improve.

Important: the goal is not to become an expert before you act. The goal is to test small actions, listen to customers and improve.

Module 1 — Position Your Business

Customers need a reason to pay attention. Before promoting anything, make your offer easy to explain.

The One-Sentence Offer Formula

“I help [specific customer] achieve [desired result] through [product/service] without [common frustration].”

Example

“I help small local businesses get more customer enquiries through simple online and WhatsApp marketing without needing a large advertising budget.”

Write yours

I help...	
Achieve...	
Through...	
Without...	

Module 2 — Build Your Ideal Customer Profile

“Everybody” is not a useful target. Start with the group that has a strong reason to need your solution.

Answer these questions

- ☐ Who is most likely to need my product/service right now?
- ☐ What problem are they trying to solve?
- ☐ What result do they want?
- ☐ What are they currently doing instead?
- ☐ What worries or objections could stop them buying?
- ☐ Where do they ask questions or look for solutions?
- ☐ What words do they use to describe their problem?

Customer Profile Worksheet

Question	Your answer
Customer type / description	
Main problem	
Desired result	
Common objection	
Where they spend attention	
What makes them trust a seller	
Why they should choose my offer	

Module 3 — Research Before You Market

Good marketing starts with listening. Research real customer conversations instead of guessing what people want.

The 20-Minute Research Method

- ☐ Read 5 customer comments/questions about your problem.
- ☐ Write down repeated words and phrases.
- ☐ Record the top 3 frustrations you notice.
- ☐ Record the top 3 desired outcomes.
- ☐ Record common objections or reasons people hesitate.
- ☐ Turn one repeated problem into a useful post or offer.

Customer Language Bank

What customers say	What I can create/do

Module 4 — Find Your Customers

Your customers already gather somewhere. Your job is to identify those places and show up with something useful.

Use the 6-Channel Map

Search

Google, YouTube and search-driven platforms.

Social

Instagram, Facebook, TikTok and other relevant networks.

Communities

WhatsApp groups, Facebook groups, professional communities and local networks.

Competitor ecosystems

Study where similar businesses get attention and what customers ask.

Offline locations

Markets, events, offices, schools, associations and other relevant places.

Partnerships

Businesses serving the same audience without directly competing.

Your Top 10 Customer Locations

Place/channel	Why customers are there	My first action

--	--	--

Module 5 — Attract Attention With Useful Messages

The strongest messages are about the customer's situation, not just the seller's business.

The 4-Part Message Formula

Problem → Result → Proof → Action

Problem: name the pain or need. Result: explain the desired outcome. Proof: demonstrate, teach, show evidence or share a customer story. Action: give one clear next step.

5 Content Types That Can Generate Conversations

- ☐ Problem-solving: answer a question customers repeatedly ask.
- ☐ Educational: teach a simple concept or process.
- ☐ Comparison: explain how to choose between options.
- ☐ Proof: demonstrate results, process, testimonials or case examples.
- ☐ Offer: clearly explain what you sell and who it is for.

10 Ready-to-Adapt Hooks

- Before you spend money on [solution], check these 3 things.
- If you are struggling with [problem], start here.
- 3 mistakes people make when trying to [result].
- Here is a simple way to [desired result].
- What nobody tells you about [problem].
- How to choose the right [product/service] for your situation.
- Do this before you contact a [type of provider].
- A quick checklist for anyone who wants to [result].
- We tested/observed [approach]. Here is what we learned.
- If I had to start again with [goal], this is what I would do first.

Module 6 — Turn Attention Into Leads

A like is attention. A message, enquiry, booking, form submission or quote request is a lead.

Choose One Primary CTA

- ☐ Message me on WhatsApp
- ☐ Request a quote
- ☐ Get the guide/checklist
- ☐ Book a call
- ☐ Ask for today's options
- ☐ Join the relevant customer list

CTA examples

“Send CUSTOMER on WhatsApp and I'll send you the checklist.”

“Message me with what you're looking for and I'll recommend an option.”

“Tap Get the Blueprint to see the full guide.”

Simple Lead Tracker

Name	Need	Source	Next step	Status

Module 7 — Follow Up and Build Trust

Follow-up is not chasing. It is helping someone who has already shown interest make a clear decision.

A 4-Step Follow-Up Sequence

1. Confirm

“Thanks for reaching out. You mentioned you need...”

2. Help

Answer the question, objection or uncertainty.

3. Remind

Share a useful example, proof point or next step.

4. Close the loop

Ask whether they want to proceed; if not, leave the door open.

WhatsApp Scripts

After an enquiry: “Hi [Name], thanks for reaching out about [offer]. What result are you hoping to achieve?”

After sending details: “Hi [Name], just checking that you received the details. Is there anything you'd like me to clarify?”

After no response: “Hi [Name], no pressure. If you still need help with [problem], you can message me anytime.”

After a purchase: “Thanks for choosing us. If you need help using [product/service], please reach out. We'd also appreciate your feedback.”

Module 8 — Build an Offer People Can Understand

Make the buying decision simple by answering six questions quickly.

The 6-Part Offer Framework

What is it?

State the product/service clearly.

Who is it for?

Name the customer.

What problem does it solve?

Connect it to a real need.

What do they get?

List the actual deliverables.

How much does it cost?

Show the price clearly.

What happens next?

Give one buying instruction.

Example — The Customer Finder Blueprint

For: small businesses, entrepreneurs and service providers.

Purpose: learn a simple system for finding, attracting and converting customers.

Includes: step-by-step modules, worksheets, message hooks, lead tracker, follow-up scripts and a 7-day action plan.

Launch price: ₦3,000.

Regular price: ₦5,000.

Important: only advertise the price, bonuses or guarantees that you actually provide.

Mini Case Studies — How the System Works

These are illustrative examples. Use them to understand the process, not as claims about actual results.

Local food business

Customer: busy workers nearby. Problem: finding convenient meals. Location: WhatsApp/Instagram/local offices. Message: show meals, prices, delivery process. CTA: “Message for today's menu.”

Hair/beauty service

Customer: people preparing for events. Problem: reliable service and scheduling. Location: Instagram, referrals, local communities. Message: show work, availability and preparation tips. CTA: “Send your date for availability.”

Professional service

Customer: small businesses with a specific operational problem. Problem: lack of time/knowledge. Location: LinkedIn, WhatsApp, referrals, business groups. Message: educational posts and simple checklists. CTA: “Request a quick assessment.”

Case Study Builder

Before	What problem existed?	
Customer	Who needed help?	
Action	What did we change?	
Result	What measurable result occurred?	
Lesson	What should we repeat?	

Your 7-Day Customer Finder Sprint

Turn the Blueprint into action instead of letting it become another document you never use.

Day 1	Define your customer and write your one-sentence offer.
Day 2	Research 10 customer questions/problems.
Day 3	Map 10 places/channels where customers can be found.
Day 4	Create 3 useful messages using the 4-part formula.
Day 5	Publish/contact and invite one simple action.
Day 6	Follow up with every interested person.
Day 7	Review numbers and decide what to repeat or change.

Weekly Numbers to Track

Metric	This week	Next week
People reached		
Responses		
New leads		
Follow-ups		
Sales		
Revenue		
Best channel		

Quick Reference Toolkit

Keep these formulas close while you work.

Customer Finder Formula

Right customer + real problem + right place + useful message + easy next step + consistent follow-up = more opportunities to sell.

Message Formula

Problem → Result → Proof → Action

Offer Formula

Product → Customer → Problem → Deliverables → Price → Next step

Weekly Review

- ☐ What worked?
- ☐ What did customers respond to?
- ☐ Where did the best leads come from?
- ☐ What objections appeared repeatedly?
- ☐ What will I test next week?

Your Next Move

Choose one customer, one problem, one channel and one offer. Start there. Small consistent actions beat complicated plans that are never implemented.

THE CUSTOMER FINDER BLUEPRINT

Find the right people. Start useful conversations. Follow up. Improve.
